

1. (Amended) An apparatus comprising:

a substrate having a first surface, wherein the first surface of the substrate contains a first plurality of fasteners of one of a plurality of hook and loop mechanisms and each of the first plurality of fasteners including one of a first fastener type;

a cable fastener comprising a single type of fastener of the one of the plurality of hook and loop mechanisms, wherein the single type of fastener is configured to engage the first fastener type, wherein the cable fastener is separate from the substrate; and

wherein the cable fastener is further shaped to define:

a variable-width opening,

an elongated body having a predetermined width,

a head portion at one end of the body, the head portion having a width greater than the predetermined width,

the head defining an opening through which the head of the cable fastener may be pulled.

- 2. The apparatus recited in Claim 1, wherein the plurality of hook and loop mechanisms includes one or more mushroom-shaped stems.
- 3. The apparatus recited in Claim 1, wherein the plurality of hook and loop mechanisms includes one or more pine-tree-shaped stems.
- 4. The apparatus recited in Claim 1, wherein the plurality of hook and loop mechanisms includes one or more hooks.
- 5. The apparatus recited in Claim 1, wherein the plurality of hook and loop mechanisms includes one or more loops.
 - 6. The apparatus regited in Claim 1, wherein the substrate is planar.

7. (Amended) The apparatus recited in Claim 1, further comparings a rigid frame.

- 8. The apparatus recited in Claim 7, wherein the frame includes at least one planar surface.
- 9. The apparatus recited in Claim 7, wherein: the substrate includes a second surface substantially opposite the first surface; and the second surface of the substrate is coupled to the frame.

Claim 10 has been cancelled.

11. (Amended) A method of maraging cable, comprising:

supporting one or more cables with a cable fastener, the cable fastener being shaped to be capable of defining a variable-width opening, wherein the cable fastener contains one of a plurality of hook and loop mechanisms; releasably engaging the cable fastener to a substrate, wherein the substrate contains another of the plurality of hook and loop mechanisms; and providing a rigid frame capable of accommodating a plurality of fiber cables;

- 12. The method recited in Claim 11, wherein the plurality of hook and loop mechanisms includes one or more mushroom-shaped stems.
- 13. The method recited in Claim 11, wherein the plurality of hook and loop mechanisms includes one or more pine-tree-shaped stems.
- 14. The method recited in Claim 11 wherein the plurality of hook and loop mechanisms includes one or more hooks.
- 15. The method recited in Claim 11, wherein the plurality of hook and loop mechanisms includes one or more loops.
 - 16. The method recited in Claim 1, wherein the substrate is planar.

Claim 17 has been cancelled.

by le

18. (Amended) The method recited in Claim 11, wherein the frame includes at least one planar surface.

Ala

19. (Amended) The method recited in Claim 11, further comprising: coupling a second surface of the substrate to the frame, wherein the second surface is substantially opposite the first surface of the substrate.

20. The method recited in Claim 11, wherein the cable fastener is further shaped to define: an elongated body having a predetermined width; and

a head portion at one end of the body, the head portion having a width greater than the predetermined width;

the head defining an opening through which the head of the tie wrap may be pulled.

21. The method recited in Claim 11, wherein the cables comprise one or more fiber optic cables.

22. The method recited in Claim 1, wherein the cables comprise one or more electrical cables.

23. (Amended) An apparaths comprising:

a means for supporting one or more cables, wherein the means for supporting one or more cables includes a cable fastener means;

a means for releasably engaging the cable fastener means; and

a frame means for supporting one or more fiber cables configured to receive the cable fastener means

24. The apparatus recited in Claim 23, wherein the means for releasable engagement includes one or more mushroom-shaped stems.

25. The apparatus recited in Claim 23, wherein the means for releasable engagement includes one or more pine-tree-shaped stems.

26. The apparatus recited in Claim 23, wherein the means for releasable engagement includes one or more hooks.

by>

- 27. The apparatus recited in Claim 23, wherein the means for releasable engagement includes one or more loops.
 - 28. (Amended) The apparatus recited in Claim 23, further comprising: a substrate means.

Claim 29 has been cancelled.

Al

- 30. (Amended) The apparatus recited in Claim 23, further comprising: a substrate means; and
- a means for coupling the substrate means to the frame means.
- 31. The apparatus recited in Claim 23, wherein the cable fastener means further comprises: a means for encircling the one or more cables such that each of the one or more cables is squeezed into contact with at least one other of the one or more cables.
- 32. The apparatus recited in Claim 23, wherein the one or more cables comprise one or more fiber optic cables.
- 33. The apparatus recited in Claim 23, wherein the one or more cables comprise one or more electrical cables.
 - 34. An apparatus for managing cable, comprising:
 - a rigid frame capable of accommodating a plurality of cables, the frame having at least one planar surface;
 - a planar substrate having a first surface and a second surface, the second surface being substantially opposite the first surface, the first surface of the substrate containing a plurality of engagement mechanisms, the second surface of the substrate being coupled to the planar surface of the frame; and
 - a tie wrap containing loops capable of engaging the engagement mechanisms of the substrate, wherein the tie wrap is thereby capable of being releasably engaged to the substrate by means of a hook and loop connection, and wherein the tie wrap is shaped to define: an elongated body having a predetermined width; and
 - a head portion at one end of the body, the head portion having a width greater than the predetermined width, and defining an opening through which the body of the tie wrap may be pulled.

Ble>

35. The apparatus recited in Claim 34, wherein the hooks are mushroom-shaped stems.

Also

36. The apparatus recited in Claim 34, wherein the plurality of cables comprises a plurality of fiber optic cables.

37. The apparatus recited in Claim 34, wherein the plurality of cables comprises one or more metal cables.
